

24" RISER & RISER PAN SERIES

The Polylok 24" riser family offers similar stacking flexibility to our 12" and 20" risers. You can achieve any 2" increment by pairing our 2", 6" or 12" risers to meet your specific height requirements. Our 3" riser/riser pan can be poured in place or used in the riser stack. With a focus on safety, all of our risers accept a Polylok safety screen to prevent unwanted access in the event the tank is left open. We offer a large selection of riser covers and grates to meet your desired application. Our covers are all made with the highest UV available and all of our risers and covers are manufactured in the USA.

RISER SAFETY DEVICES

Safety has become an area of focus in the wastewater industry. Many states are requiring secondary safety devices on all septic systems. Polylok has been a leader in developing these devices. Septic system companies typically suggest or use a concrete plug, but using plastic as a secondary layer of protection is also cost effective and easy to install. We offer several different styles to meet your specific needs. Riser safety screens work with our 12", 20" and 24" Polylok risers. 24" Universal Safety Screens work with PVC ribbed pipe, HDPE corrugated pipe and concrete risers. The Lid-Lok Safety Device works with our 20" and 24" riser covers. We also offer a 20" Dual Safety Cover for the 24" riser pan. These secondary safety devices can prevent tragic accidents. They are inexpensive, easy to install, and your customers will thank you!
