

STRONG DURABLE TRUSTED

Precast concrete septic tanks are used in more applications in Ontario than any other type, and for good reason.

Precast concrete is strong, dense and watertight. Tanks can be backfilled without special procedures, imported material or filling with ballast water. They can be hooked up and used immediately. Concrete won't float, stretch, shrink or bend. Precast septic tanks are designed and manufactured in Ontario, to specifications unique to our province, for use in our harsh northern climate. They have a history of reliability and durability that spans decades, are trusted by specifiers who include them in their designs, and installers who stake their reputation on their work.

Concrete Precasters of Ontario—Precast to Perform
